

## CMSI 402 Project Status Sheet

Fall 2018

**Name:** Megan Karbowski

**Date:** 2/19

**Project:** Ancur

**Period Covered:** up to week of 2/19

---

### **Accomplishments since last report:**

- Successfully imported React library.
- Stampery API has been implemented partially - files can be chosen to be “stamped,” the API will then return the file’s id, hash, timestamp, and token.
- Ancur’s logo has been designed.
- The feature to retrieve and prove a stamp and its receipts is in progress.

### **Scheduled tasks to be done by next report:**

- Finish implementation of feature to retrieve and prove stamps and their receipts.
- Work on UX/UI of application.
- Clean up display of stamps/receipts.
- Determine if a database will be needed or not.

### **Noteworthy risks, concerns, or problems:**

- If a database is implemented to hold receipts, privacy could be lost.
- Won’t be able to implement the feature allowing users to view the actual document itself after it has been validated.
